Soft-close antibacterial toilet seat (white) – model DST/23B

The DST/23B toilet seat is a durable product designed for public bathrooms, combining aesthetic appeal with high resistance to heavy use. This model serves as a complementary equipment element dedicated to ST23 stainless steel toilet bowls. Thanks to its universal white color, the seat also blends perfectly with classic ceramic sanitary ware, fitting seamlessly into any interior design.

Durable duroplast and easy maintenance

The product is made of high-quality duroplast – a material characterized by exceptional hardness and resistance to scratches or mechanical damage. **Additionally, the smooth surface of the DST/23B seat features antibacterial properties**, which significantly raises hygiene standards in high-traffic areas.

Furthermore, the white finish is simply easy to keep impeccably clean, maintaining its aesthetic look over a long period of time.

Functionality and solid mounting

The DST/23B model is equipped with a soft-close function, which effectively protects the seat from impacting the bowl and increases user comfort. The quick-release system allows for instant removal, enabling thorough cleaning of even hard-to-reach stable corners. Moreover, the use of solid metal hinges guarantees stable positioning and long-term reliability under conditions of frequent, daily exploitation.
