Weight	6 kg
Assembly	Wall
Includes	Mounting kit, key

The changing tables we offer make it very easy to look after children in public places. The profiled construction ensures the child's safety and the strap prevents the child from accidentally sliding off the changing table. The material from which the changing table is made - polyurethane - has antibacterial properties thanks to which the surface is easy to clean and safe even for the youngest children. In the vertical part there are partitions - tissue dispensers for more convenient use of changing tables. Thanks to the foldable construction, the changing table does not take up much space in the room for a mother with a child.
