Includes	Mounting kit

The BCTV vertical changing station is an indispensable equipment for every public bathroom. The presented changing mat is made of durable polyurethane. In addition to durability, polyurethane has antibacterial properties, thanks to which the outer surface is easy to clean and safe even for the youngest children. The contoured design of the changing table and the built-in safety strap are the key elements ensuring safety during use.

The vertical part has partitions - tissue dispensers for more convenient use of changing mats. Thanks to its foldable structure, the BCTV changing table does not take up much space in the room for mother and baby. It is worth adding that the changing table is intended for children up to 3.5 years old and weighing less than 23 kg.
