ZZ-fold paper towel dispenser, brushed steel – model C7104S

The **C7104S model** is a professional solution for sanitary spaces, combining the aesthetics of **AISI 304 stainless steel** with a durable construction. The matte, brushed finish highlights the modern character of the interior and makes it easier to maintain a flawless appearance in places such as **public restrooms**.

Reliability and durability of AISI 304 steel

The use of steel resistant to corrosion and mechanical damage ensures high resistance of the device to daily, intensive use. Rounded edges and the absence of protruding elements increase the safety standard during operation. The product allows for the creation of a cohesive system with other steel solutions, such as [stainless steel toilets](#) and [steel washbasins](#).

Operational ergonomics and content security

A capacity of **400–600 ZZ towels** allows for the optimization of service cycles and effective facility management. The front viewing window enables immediate verification of the paper level, and the integrated cylinder lock protects the insert from unauthorized access. The dispenser is visually compatible with the rest of the MAKOINSTAL range, including [soap dispensers](#), [toilet brushes](#), and [waste bins](#).

The product holds a **PZH hygienic certificate** and a National Declaration of Performance (**KDWU**). A **matte black version is also available: model C7104A (Black Edition)**.
